Reviews

This published publication is fantastic. it had been writtern very perfectly and useful. Once you begin to read the book, it is extremely difficult to leave it before concluding.

(Junius Herman)

**COLD GAS AT HIGH REDSHIFT PROCEEDINGS OF A WORKSHOP
CELEBRATING THE 25TH ANNIVERSARY OF THE WESTERBORK
SYNTHESIS RADIO TELESCOPE, HELD IN HOOGEVEEN, . 1995
ASTROPHYSICS AND SPACE SCIENCE LIBRARY**

Springer. Hardcover. Book Condition: New. Hardcover. 468 pages. Dimensions: 9.2in. x 6.1in. x 1.1in. Recent years have seen increasing evidence that the main epoch of galaxy formation in the universe may be directly accessible to observation. Angular fluctuations in the background relic radiation have been detected by various ground-based instruments as well as by the COBE satellite, and suggest that the epoch of galaxy formation was not so very early. Combined optical and radio studies have found galaxies at redshifts above 2.0, systems that at least superficially show the characteristics expected of large galaxies seen only shortly after their formation. And absorption lines in the spectra of quasars seem to be telling us that most cold gas at early to intermediate cosmological epochs was in clouds having roughly galaxy sized masses. What kinds of new observations will best help us study this high redshift universe in future? What new instruments will be needed? These are questions that loom large in the minds of the Dutch astronomical community as we celebrate 25 years of operation of the Westerbork Synthesis Radio Telescope. Celebration of this Silver Jubilee has included a birthday party (on 23 June, 1995), a commemorative volume looking at both the history and the future of the facility (The Westerbork Observatory, Continuing Adventure in Radio Astronomy, Kluwer 1996), and an international workshop, held in the village of Hoogeveen on 28-30 August, 1995. This item ships from multiple locations. Your book may arrive from Roseburg, OR, La Vergne, TN. Hardcover.
