Not illustrated. 1905 Excerpt: . . .). I low many hogs did you sell last year About how much did they weigh I low much phosphoric acid went with them How much nitrogen How much potash 10. Did you sell any wheat Any other grain Ifo, how much How much of your farm went with it To The Teacher: Require pupils to furnish data for other similar problems. 7. Legumes. From a study of the table on fertilizing substances in different soils and a comparison of this table with the one on fertilizing substances in farm crops, it will be seen that nitrogen is the element which, from ordinary soils and under ordinary conditions of farming, is likely to be the soonest exhausted. Ordinarily, then, the farmers attention should be turned to methods of restoring nitrogen. If a sufficient quantity of manure were produced on the farm, of course the best method of fertilizing would be to apply barnyard manure to the soil, as it not only contains nitrogen, but also phosphoric acid and potash, the other needed elements. But it is not always possible to do this. There is a class of plants, however, called legumes, that have the power to add nitrogen to the soil. Peas, beans, clover and alfalfa belong to this class. It is the purpose of this chapter to explain the manner in which these plants add nitrogen to the soil. The air that we breathe is composed largely of two gases--oxygen and nitrogen. Both...
