Inert Strength The inert strength data is presented in Table 4. The as-received strength value determined in this study can be compared to previously reported Zerodur strength ( 90 MPa, Table 2 ) by first calculating the strength at a 5 failure probability using Eq. ( 2 ) and then scaling the 5 failure probability strength to the appropriate test area using Eq. ( 3 ). Taking ( ro 197. 9 MPa and m 3. 2 ( Table 4 ) the as-received strength at a 5 failure probability is 78. 2 MPa. Then scaling from the 0. 264 cm<sup>2</sup> area used in this study is to the 0. 5cm<sup>2</sup> area previously used the strength is 64. 1 MPa. The lower strength determined from this study indicates that the surface finish was slightly better on the previously tested specimens. Table 4. Inert Strength Weibull Paramete...
