

The Geology of the Isle of Purbeck and Weymouth

By Aubrey Strahan

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 118 pages. Dimensions: 9.7in. x 7.4in. x 0.2in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1898 Excerpt: . . . three feet thick, much hardened, and with many phosphatic casts, and below it (that is, to the south of it, all being vertical) a very hard white rock, composed of slightly glauconitic sand so closely cemented as to resemble quartzite, three feet thick, and passing down into three feet of green sand, with lumps of white rock as above. Below these come nine feet of hardened green sand, with nodular and tabular chert. Durdle. The full sequence can be obtained by combining the observations made on the two sides of the promontory of Durdle Door. In the following section the chert-beds were measured on the west cliff, and the remainder along the top of the east cliff, in Man-o-War Cove. Section of the Upper Greensand and Gault near Durdle Door. Chloritic Marf. (See p. 181). Ft. In. Hard white rock like quartzite (a green sand cemented)...

Reviews

Very beneficial to all of class of people. I am quite late in start reading this one, but better then never. You may like just how the writer create this publication.
